HIGH PRECISION MACHINES FOR CAN MANUFACTURING

SPIN FLANGER SFV 1200

This machine is working according to the spin flanging principle which is well proven in the can making industry and can be used for flanging welded can bodies for food, beverage or aerosols. It has especially been built for the use with very thin double reduced tinplate in DR 8 quality. The machine has 12 heads, and its vertical design allows the installation of a straight-lined and inexpensive conveyor through parter, necker, flanger and beader.

Its essential characteristics are the consistently precise manufactured container, the compact design, the very smooth running without vibrations and the simple handling. For further information please see the technical details.

Most modern technology and high precision machining of parts for smooth and trouble free production.

PLC controlled production units for high precision tool manufacturing.

TECHNICAL DETAILS SFV 1200

- high flexibility thanks to short change-over times for diameter and height
- excellent accessibility
- central oil lubrication system
- high flexibility and space saving setup thanks to electronic synchronisation
- electronic control of machine functions
- electronic speed regulation
- declaration of CE-conformity for machine and control
